

MATH 141 EXAM #1 KEY (FALL 2018)

**1a** We have  $f'(x) = 6 + \cos x$ , so  $f'(x) > 0$  for all  $x \in \mathbb{R}$ , which implies  $f$  is strictly increasing everywhere and is therefore one-to-one.

**1b** Since  $f(0) = 0$ , by the Inverse Function Theorem we have

$$(f^{-1})'(0) = (f^{-1})'(f(0)) = \frac{1}{f'(0)} = \frac{1}{6 + \cos(0)} = \frac{1}{7}.$$

**2a** Quotient rule:

$$y' = \frac{(\ln x - 2)(1) - (x)(1/x)}{(\ln x - 2)^2} = \frac{\ln x - 3}{(\ln x - 2)^2}.$$

**2b** Chain rule:  $f'(x) = \sec^2(\cos e^x) \cdot (-\sin e^x) \cdot e^x = -e^x \sin(e^x) \sec^2(\cos e^x)$ .

**2c** We have

$$\begin{aligned} g'(x) &= \frac{d}{dx} (e^{(x-1)\ln(\cot x)}) = e^{(x-1)\ln(\cot x)} \frac{d}{dx} [(x-1)\ln(\cot x)] \\ &= (\cot x)^{x-1} \left[ -\frac{(x-1)\csc^2 x}{\cot x} + \ln(\cot x) \right]. \end{aligned}$$

**2d** We have

$$h'(t) = \frac{d}{dt} (e^{t^{1/2}\ln t}) = e^{t^{1/2}\ln t} \frac{d}{dt} (t^{1/2}\ln t) = t^{(t^{1/2})} \left( t^{-1/2} + \frac{1}{2}t^{-1/2}\ln t \right).$$

**2e** Use algebra to find that

$$\ell(x) = \frac{4\ln(1-x^3)}{\ln 3}.$$

Now,

$$\ell'(x) = \frac{12x^2}{(x^3 - 1)\ln 3}.$$

**2f** By the Chain Rule:

$$\varphi'(u) = \frac{1}{1 + (4u - 4)^2} \cdot (4u - 4)' = \frac{4}{1 + (4u - 4)^2}.$$

**2g**  $y' = 2x \cosh^3(5x) + 15x^2 \cosh^2(5x) \sinh(5x)$ .

**3** Here  $y'(x) = 2e^x$ , so slope of the tangent line at  $x = \ln 6$  is  $y'(\ln 6) = 2e^{\ln 6} = 12$ . Also the tangent line contains the point  $(\ln 6, 20)$  since  $y(\ln 6) = 2e^{\ln 6} + 8 = 20$ . Equation of the line:

$$y = 12x + (20 - 12 \ln 6).$$

**4a** Let  $u = x^6$ , so

$$\int x^5 e^{x^6} dx = \int e^u du = \frac{1}{6} e^u + c = \frac{1}{6} e^{x^6} + c.$$

**4b** Let  $u = \ln(\ln x)$ , so  $du = \frac{1}{x \ln x} dx$ , and the integral becomes

$$\int \frac{1}{u} du = \ln |u| + c = \ln |\ln(\ln x)| + c.$$

**4c** Let  $u = \cos x$ , so  $du = -\sin x dx = -\frac{1}{\csc x} dx$ . Integral becomes

$$-\int e^u du = -e^u + c = -e^{\cos x} + c.$$

**5a** Letting  $u = e^{t/2} + 1$ , so integral becomes

$$\int_{1/e+1}^{e+1} \frac{2}{u} du = 2 \ln |u| \Big|_{1/e+1}^{e+1} = 2 \ln \left( \frac{e+1}{e^{-1}+1} \right) = 2.$$

**5b** Use a given formula:

$$\frac{1}{2} \int_0^{3/2} \frac{1}{\sqrt{9-x^2}} dx = \frac{1}{2} \left[ \sin^{-1} \left( \frac{x}{3} \right) \right]_0^{3/2} = \frac{\pi}{12}.$$

**5c** Let  $u = \cosh 4x$ , so integral becomes

$$\frac{1}{4} \int_1^{\cosh 4} u^3 du = \frac{1}{4} \left[ \frac{1}{4} u^4 \right]_1^{\cosh 4} = \frac{\cosh^4 4 - 1}{16}.$$

**6** We have

$$\lim_{x \rightarrow \infty} e^{\frac{\ln(2x^3+1)}{\ln x}} = \exp \left( \lim_{x \rightarrow \infty} \frac{\ln(2x^3+1)}{\ln x} \right) \stackrel{\text{LR}}{=} \exp \left( \lim_{x \rightarrow \infty} \frac{6x^2/(2x^3+1)}{1/x} \right) = \exp \left( \lim_{x \rightarrow \infty} \frac{6x^3}{2x^3+1} \right) = e^3.$$
