President Shanblatt clears up budget crisis rumors

By: Peterson Page

While Bucks County Community College is considering borrowing up to $3.5 million if there is no resolution to the current budget standoff in Harrisburg, Bucks President Dr. Stephanie Shanblatt wants students and faculty alike to know that Bucks has things under control.

According to the Bucks County Courier Times, the Board of Trustees has recently given its consent for Bucks to seek out a “short term line of credit” from PNC Bank. The Courier also pointed out that the money will be used if Bucks does not receive an expected allotment of $4.3 million from the state legislature by the end of December.

To better understand the rationale behind the steps that Bucks is taking to sustain its finances, it is important to get the expected funding from the state, an interview was conducted with the president of the college, Dr. Stephanie Shanblatt.

During the interview, Shanblatt thought it was important to explain that the formula between getting a line of credit and taking a loan is a factor. Thus, based on the explanation provided by the president, Bucks would not receive a one-time $3.5 million loan from PNC. Rather, the line of credit would result in Bucks accessing funds that will be used on an as-needed basis.

When asked if she was wor ried that Bucks would go into debt as a result of the budget situation, Shanblatt said that, “the school is not broke and doesn’t expect to get all of the money [as its expected annual allocation] from the state once the budget is passed.” Shanblatt also provided a brief overview of Bucks’ revenue streams and its major expenses. According to the president, Bucks has three main sources of funding. The school gets the bulk of its revenue from student tuition, it gets about 75 percent of the school’s funding. The rest of its funding comes from the budget by the end of December.

The goal of all of these mandates programs, Shanblatt explained that the money is then allocated to a general fund. After being moved into a general fund, the money is then allocated to the school’s budget. “It allows me to keep a job.”

Smaller class sizes also contribute to the appeal of community colleges. Teachers are in a better position to develop relationships with their students, easing the transition into college and encouraging continued success.

“Students can learn in a variety of settings that can meet them where they are in their lives. That can be in their workplace, their community or at home. The variety of formats is so much different from traditional classroom experiences.”

Students explained that Pennsylvania community colleges feature wide arrays of services to aid students in degree completion.

“For the goal of all of these efforts is to help students benefit from their educational experience while balancing work, family and personal priorities. Several colleges have and operate child care programs on campus for students.”

Community colleges offer valuable opportunities for many

By: Michelle Hurd

Right out of high school, Jennifer Bell knew she wanted to go to college, but she wasn’t sure if she could afford it. On top of that, she struggled with addiction.

She enrolled at Bucks County Community College and eventually discovered a love of writing. However, her addiction continued and took a toll on her education. So, she dropped out in order to focus on getting sober.

As she continued on the path of recovery, Bell became a mom. She balanced caring for her young daughter and working as a server.

But, all this time, she never let go of the dream of finishing school and becoming a writer.

Understanding that she wouldn’t be able to go to school into her already busy life, she thought of Bucks, knowing it would allow her the flexibility to balance family, work and maintaining her sobriety, all while pursuing an education.

Community colleges adapt to students’ needs.

In addition to their affordability, community colleges across Pennsylvania have emerged as a compelling option among institutions of higher education, for adapting over time to the challenges often threatening the reality of today’s students.

Currently, more than half of the nation’s undergraduate students are educated by community colleges, and for those who might not otherwise afford it. On average, one year of tuition at a community college is less than half of what students pay at Pennsylvania’s most affordable public four-year universities.

Often a community college student is juggling multiple obligations, such as full-time work or family commitments, along with their studies. These students need a school that can meet them where they are in their lives.

According to the American Association of Community Colleges, “No other segment of higher education is more responsive to its community and workforce needs than the community college.”

Flexibility is a huge draw of community colleges, allowing students to fit classes into their busy schedules. A student can take one class at a time or enroll full-time, going at a pace that works best for them. For many cases, students can set their own pace, choosing a day of week, evening or online options.

19-year-old nursing student, Joe Well explained why he chose community college, “Originally, it was for cost and convenience.”

Well, who plans to transfer after attaining his associate’s degree, said he also appreciates the ability to fit classes around his busy work schedule. “It allows me to keep a job.”

“Community colleges typically have a more diverse student population than students over the age of 24, first-generation students, veterans, students with disabilities, and students from low-income families. Coming from a variety of backgrounds—socially, financially and academically—many community college students face a unique set of challenges that might otherwise deter them from pursuing or completing an education.

Shanblatt explained that Pennsylvania community colleges feature wide arrays of services to aid students in degree completion.

“The goal of all of these efforts is to help students benefit from their educational experience while balancing work, family and personal priorities. Several colleges have and operate child care programs on campus for students.”

Community colleges offer valuable opportunities

Continued from pg. 3

As the array of student veterans, their dependents, and those currently serving expands, many more students are taking advantage of the GI Bill. According to Bucks Provost Clayton Railey, “The primary change in making mandatory for all students is establishing a personal and direct connection between a student and his or her advisor in the student’s major; every study conducted across the country shows that this connection increases retention and success rates.”

For students planning to transfer, community colleges have dual admissions and transfer agreements in place with many of the surrounding four-year schools.

Students who plan to transfer to a four-year institution should select based on previous academic performance,” said Bolden. “We’re seeing a lot of interest in students who plan to transfer to Temple.

Community colleges are diverse institutions that serve a wide variety of purposes,” said Bolden. “These include providing programs for students who are entitled. For students planning to transfer, community colleges have dual admissions and transfer agreements in place with many of the surrounding four-year schools.

Pennsylvania’s community colleges are diverse institutions that serve a wide variety of purposes,” said Bolden. “These include providing programs for students who are entitled. For students planning to transfer, community colleges have dual admissions and transfer agreements in place with many of the surrounding four-year schools.

Bucks awarded $350,000 grant from the National Science Foundation

By: Colleen Gall

Bucks awarded $350,000 grant from the National Science Foundation

Dr. Andrew Lawlor, the CIO of Information Technology Services and Principal Investigator, and a team of faculty members heard about the opportunity for the grant and began to work on a proposal based upon the requirements. They learned Bucks was awarded the grant in late August and started the planning process. The grant covers a two-year period that will bring about $350,000 worth of equipment and services to the college.

Dr. Lawlor’s team includes Ron Smith, Director of Networks and Infrastructure, who developed the network’s plans and will have a key role in the implementation of the new network. Lisa Angelos, the Dean of the STEM department, assisted in finding faculty members for the case and will promote the use of the network among the college faculty. Also, Patricia Smallacombe, the college’s grant coordinator whose expertise is in developing grant applications and following requirements, ensures that our submitted proposals are given due to consideration.

Dr. Lawlor says, “This is a cyberinfrastructure grant from the Directorate for Computer Information Science & Engineering of the National Science Foundation.” “The grant supports the use of advanced networks for research and education,” he adds.

The money will help with the development of a high-speed and capacity network that is limited to research projects and educational experiences. Dr. Lawlor explains, “This network will not solely be housed in the new Science building and the STEM department, but will connect workstations in there that will be housed in the new Science building and the STEM department.”

“The network will not solely be housed in the new Science Center, but will connect workstations in there that will access the new network once the building is completed.”

This grant is going to provide Bucks with a network for faculty members to conduct research and get students involved so they can gain experience with using high capacity networks for data-intensive projects. It’s an opportunity to do some “big data.” He adds that the new network “will have the capability to support big data applications and research.”

Dr. Lawlor says, “This is a great opportunity for the engineering disciplines to have access to this technology, with the capability to support big data applications and research.”

He uses the example of drone research at high speeds on an outdoor wireless network. There will also be a connection to Internet2, which is a special research and education network that has resources not generally available from commercial Internet providers.

The grant team has plans to provide the faculty with information about the applications so they can choose to use them to advance understanding of concepts in the classroom. Overall, this is going to benefit the entire campus, not only the new Science building. Students will have the opportunities to learn more about the technology that will be provided and learn how to do more in-depth data analysis.

Bucks is the only community college grant this award but we are also partnering with the University of Pennsylvania.

Dr. Lawlor explains that the University of Pennsylvania has “a great wealth of experience with high speed networks and research projects and are advising Bucks on our network design and research and education planning.”

They will aid in the design, provide technical services to ensure the network meets the current and future needs.

In addition Bucks is also reaching out to KINBER, an organization that operates the Pennsylvania Education and Research Network (PennREN). Bucks currently utilizes it for a majority of our Internet access, as well as the Pittsburgh Supercomputing Center.

For more information on the grant, contact Dr. Andrew Lawlor at andrew.lawlor@bucks.edu and for more information on the new science building and the STEM department, contact stem@bucks.edu.

F.T.O. provides useful experience for education majors
Gaining real-life and first-hand experience is what makes this group so beneficial

By Tia Truchel

The Future Teachers Organization welcomes all who want to engage in activities and events to broaden their horizons and help guide their careers in aspiring education.

With a rising membership of 100 students, this organization is a great way to find valuable experience for students who are aspiring to become teachers. It was formed to give education majors the opportunity to broaden their field of study.

President of the group, Lauren Girrill, who is involved with F.T.O. for three years, said, “We do a lot of community service and we want our members to gain a better understanding and connection with our community.”

Many times help students enhance and expand their field of study by getting assistance on creating portfolios, creating lesson plans, and obtaining transfer and advising guidance for their careers after Bucks.

Although the licensing requirements in this field of study are constantly changing and evolving, the organization constantly offers the most up-to-date and accurate versions of the tests to help you better prepare.

F.T.O. supports many exciting events and outreach throughout the community, helping to further engage the students with the ones around them. They recently helped out in the Libertae Drive, by helping many kids with their homework and distributing gift cards and toys.

“War of Wigs” benefits local HIV/AIDS victims

Bucks will be hosting its annual “War of the Wigs” drag show and will be giving a $250 grand prize for the best performance.

The show will be on Nov. 6 at 7:30 p.m. at the Newton Campus Gateway Auditorium and they will be raising money to house people suffering from HIV and AIDS.

“War of Wigs,” a play on “War of the Worlds,” is the Open Door Club’s main project for the fall semester. The Open Door Club created the show as a charity event so the club can contribute back to the community. Open Door Club’s Vice President John Dacpano, 21, stated, “It (the drag show) is important because not only does this raise money for the community but it also raises awareness for the cause.”

The first three years of the show have been competitive but this year the Open Door Club has added their own twist. “We have performers but they will not be competing. They will just be out on stage to have fun and raise money for our cause,” wrote Dacpano.

Bucks students and alumni will do the performances. According to Dacpano finding people to perform is difficult because there are not a lot of students at Bucks that perform and do drag. The charity cause helps sway some people with no past experience in drag to participate. Past students come back to help fill the void and enjoy the thrill of performance again.

Performers will lip synch songs of their choice with choreography. The contestants’ performances are generally about the length of one song. Most of the music will be by hit pop artists such as Beyoncé, Lady Gaga, and Rihanna.

“The shows are important because it gives people like me an outlet in life to show the different sides that we all have in,” Dacpano explained, “The shows contradict the way that we see things as being masculine or feminine.”

Behind the scenes, the performers do prep work including makeup, hair, and choreography. “Before any event, I make sure everything is good to go before I start my transformation,” said Dacpano.

Dacpano will have outfits to go with each of his performances, adding up to 4 to 5 outfit and hair changes throughout the show. “It’s a lot of different costumes but it’s worth it!” he said.

“War of Wigs” has been successful in its three, going on four, year history. Dacpano stated, “I’ve been involved with the show since the second year they had it. It has been well received by the audience and everyone leaves with a smile on their face.”

Tickets are $5 and proceeds will go to BucksVilla, which provides local housing for people with HIV and AIDS.

Highs and lows of legalizing medical marijuana in PA

Marijuana plant

Centurion Staff

For the past five decades, the ongoing issue of the legalization of medical marijuana in the U.S. has only grown more controversial. The leading source for “Controversial Issues” states that since 2015 under state law, medical use of cannabis is legal in 23 states and the District of Columbia. Yet under federal law medical marijuana is still illegal to consume throughout the U.S. The property of marijuana used to treat disease or improve symptoms is certain chemicals in cannabis called cannabinoids (CBD). Cannabinoids are very high in antioxidant compounds and are very low in THC Tetrahydrocannabinols. “Cannabis, or marijuana, has been used for medicinal purposes for many years,” The Department of Clinical Pharmacy and Family Medicine (DCPFM) reported. “Although criminalized in the United States in 1937 against the advice of the American Medical Association, cannabis was not removed from the United States Pharmacopoeia until 1942,” says DCPF.

They go on to report that marijuana is classified as a schedule 1 drug under the umbrella that includes heroin and methamphetamine. Patients can only be treated through state wide programs and cannabis dispensaries in locations where medical use of this drug is available for patients that qualify. There are two FDA approved drugs that use certain cannabinoids in the U.S. Dronabinol and Nabilone that can be taken in pill or liquid form. They have been known to help with nausea and pain during the process of chemotherapy for cancer patients. These forms of THC CBD have also been reported to help with anorexia in patients that have immune deficiency syndrome. There were used as alternatives after traditional prescription drugs failed. CNN did a report about a 2-year-old girl, Charlotte Figi, who was having seizures consistently from as young as 3 months old. She was diagnosed with a disease called Dravet Syndrome. Dravet Syndrome is a rare, severe form of intractable epilepsy. This means the syndrome can’t be controlled by medications. Her parents tried every option there was, at one point Figi “was on seven drugs – some of them heavy-duty, addictive ones such as barbiturates and benzodiazepines. They’d work for a while, but the seizures always came back with vengeance,” CNN continued to report.

Finally when the Figis realized there was nothing else the doctor could do Paige Figi, Charlotte’s mother, turned to medical marijuana. They had a very difficult time trying to find two doctors to sign off on the treatment since Charlotte was the youngest person in Colorado to ever apply for a medical marijuana card. Bloomberg News did a report on young marijuana smokers and the drastic effects on brain development. It resulted in lower IQ’s and higher risks of strokes. Since the Figis had exhausted all resources they turned to the last resort. After getting two doctors to sign they tried their first administration of a strain of marijuana called R4. This strain is low in THC and high in CBD. After testing the oil in a lab they administered the oil to Charlotte twice a day. The results were incredible. The seizures stopped for seven days straight, CNN reported.

As more states follow the west coast into the consideration of legalizing medical marijuana, medical associations in Pennsylvania have been debating it as well. Chuck Moran, media director of The Pennsylvania Medical Association, openly talked about the position they have on Medical Marijuana within the society. “Our current active position is that we are in support of research on medical marijuana and to change marijuana’s status from a federal schedule 1 drug to federal schedule 2 drug so more research can be done.”

The American RSDHope Organization explains the main difference between these two classes of drugs. Schedule 1 drugs are highly toxic and have no medical purpose. While schedule 2 drugs can be considered to have a medical purpose. Moran explains that a bill has been in the works for past two years in Pennsylvania, senate bill 3. This bill is explained by the Pennsylvania General Assembly as “an Act providing for the medical use of cannabis in the Commonwealth of Pennsylvania.” This bill has been sitting in the House since 2014. The Pennsylvania Medical Association is against this bill due to the necessary research that this bill is lacking. The annual House of Delegates meeting occurs every year in October in Harrisburg. On average 200 doctors attend to debate a resolution for the research of medical marijuana. Then after the debate whichever recommendation is agreed upon goes to the House of Delegates. They can either vote this recommendation down, up, or send it back for another report. It could lead to a different policy or change nothing.

A Board of Trustees also meets four to five times a year to debate policy. They’ve even done media call in’s and have a panel of physicians to mediate and usually the outcome is a 50/50 split. When asked how long this debate has been going on specifically in Pennsylvania, Moran said, “This is not a new issue, it’s been going since the late 60’s.” Yet the importance of this issue has only grown larger in discussion and larger in the percentage of people that are affected by it. When 100 Bucks students were surveyed as to whether they would vote yes or no for the legalization of medical marijuana in Pennsylvania, only 3 people voted no and 2 people abstained. Asking the students that said yes, Diamond Schuler, 20, a journalism major, said, “I don’t smoke weed and don’t really know much about it but if there are benefits they should be available to those in need.” When asking students who said no, Jon Schoffer, 19, “I don’t understand the medical benefits to it so why would I vote for something I don’t understand?”

An article written a year after the legalization in Colorado by a common website called Common Dreams reported the state “benefited from a decrease in crime rates, a decrease in traffic fatalities, an increase in tax revenue and economic output from retail medical marijuana sales, and an increase in jobs.” According to Colorado’s Department of Revenue, the state collected $40.9 million in tax revenue from retail of medical marijuana sales between January 2014 and October 2014. As a society we shouldn’t be too dismissive too quickly because as the west coast moves forward, Pennsylvania should consider doing the same.
Community colleges face increased financial pressures

By: Michele Haddon

Community colleges are committed to remaining an affordable source of post-secondary education.

“We’ve had a lot of restrictions with state and county funding,” said Dr. Stephanie Shanblatt, president of Bucks County Community College. “It’s been down over the last five years.”

The year before that, it was down by 2.1 percent. And three years ago, it went up by 8.3 percent.

This year, Stout said she expects there to be another tuition increase.

“We’re building our 2015-16 budget right now, and we’re looking at about a 2.3 percent increase,” she said.

Decreased enrollment and increased tuition is a national trend. Bucks County Community College is no exception.

“Across the country, community college enrollment has been down over the last two years. That’s been a contributing factor, and was actually taking fewer credits,” said BCCC President Stephen Shanblatt.

At BCCC, the number of students enrolled for last spring was down by 3.3 percent, or 293 students. The number of classes being taken has gone down by 6 percent, or 4,561 fewer credits than Spring 2014.

Again, the decrease was expected, with an improved economy and shifting demographics to Marne, according to Shanblatt.

“This is really the natural progression of the economy improving. When unemployment goes up, our enrollment goes up,” said Shanblatt.

Unemployment rates have continued to drop since a peak in 2010 at 9.6 percent, according to the Bureau of Labor Statistics. They were down to 6.2 percent in August 2015.

Another contributing factor is the high cost of living in Bucks County. There are fewer high school graduates now,” said Shanblatt.

According to the Pennsylvania Department of Education, enrollment in primary and secondary public schools in Bucks County has decreased by more than 5 percent over the last 12 years. On April 9, BCCC Board of Trustees approved a 3.8 percent tuition increase effective fall, this means a typical full-time BCCC student will pay $4,178 for 24 credits and fees for the 2015-16 academic year.

This most recent increase follows a downward trend over the previous years during which tuition has increased on average by 5.9 percent each year. So, however, the lowest increase in the last five years.

The Board of Trustees Chair- man Jim Dancy added that the meeting was taken after careful consideration of all financial options.

“The Board of Trustees is always extremely reluctant to raise tuition;” Dancy said. “We’ve paid a lot of attention to student degree completion rates, and in turn, college success rates, and in turn, college success rates.

Bucks Community College remains steadfast in its mission and a strong commitment to the community and the region.

“Community colleges provide a doorway to a career and a strong value in the belief in the community colleges and their local communities,” said Shanblatt.

There’s no doubt that students understand the value of a college degree, but learning environment with showing there’s still a strong return on investment with a college education—a Stearns said.

According to the Pew Research Center, “A typical college graduate earns an estimated $800,000 more than a high school graduate.”

Stearns asserted that the value of obtaining a college education is very high.

According to Shanblatt, “The Gateway program at City Center in Education and the Workforce says that almost 70 percent of all jobs in the United States require some higher education, not always a four-year degree, but at least an associate degree.”

In order to earn a family-sustaining wage in today’s job market, much higher education is necessary.”

“The value of a college degree, whether as the first step of the Bachelor’s Degree or to gain immediate employment, is significant,” said Shanblatt. “Bucks community college will continue to provide a quality learning environment with faculty dedicated to their students at a great value.”
By: Michele Haddon

Community college education underestimated and underfunded

According to Bucks County Commissioner Diane Ellis-Marseglia, there are two important concepts to be considered when it comes to the county’s flux funding of the community college.

“First, the county is dependent on property taxes, as is local municipal governments and school boards. When the state started cutting its funding to school districts, in the 90s, school boards had to raise property taxes. Over the past 30 years, school property taxes have risen astronomically,” said Marseglia.

“The only way to help residents afford the school property taxes, has been for municipal and county government to not increase property taxes.”

For 24 years the county has raised property taxes a small amount, it has been to cover increased county services such as the courthouse, said Marseglia.

“Just as important is, with the increase in property taxes to the level necessary to fund BCCC at the ideal cost,” she added.

“Second, county commissioners and state legislators are all elected to office. If and when we raise taxes, we get the vote of the public. The public has not wanted property taxes increased,” said Marseglia.

While the county has made every effort to keep taxes down, why then, as community college continues to be overlooked, does the county’s correctional facility face significant increases over the same period of time?

“The county’s Department of Corrections has gone from being budgeted $2.7 million in 2005 to receiving $37 million in 2015—an increase of 57 percent.”

“We add prisoners more than the colleges. Prisons are overcrowded and colleges are suffering. Why not flip that statistic, by reorienting the funds,” said Kelly.

“The answer is pretty sim- ple,” said Marseglia.
With Halloween just around the corner, it is no secret that local newsrooms such as the Bucks County Herald are being hosted every Friday, Saturday, and Sunday this month with activities including an eerie adventure through the farm’s Haunted Hayride and Barn of Horror, an out-of-this-world experience at Alstein Encounter, and even your-face in a haunted barn!

Meg Davis, of Southhampton, has a fun face tapping into people’s fears as a clown in the hayride in a custom suit she designed and made herself. She also helps create the creepy creatures that haunt the farm, putting together maps for the make-up for the actors in the attractions.

Working at Horningford for the past three years, she always finds something new—being around 20 to 30 actors each making their way into both scaring and entertaining. Each person’s personal list of favorite transformations as the horror classic “zombie!" Davis explains faintly, “To make the zombie, I glue the prosthetics onto the person’s face, then I smooth out the edges using clear latex, after that we affix a mouth.

"If I was a zombie," Davis keeps coming back to her favorite thing about working at Horningford is being able to completely transform the actors, and mainly being able to scare people! After all, who wouldn’t want to get paid to scare people all night? Another Bucks County haunted farm is Active Fright, which hosts Shady Brook’s infamous Haunted Hayride, the equally thrilling Haunted House in the Hollow, and of course the horrifying Field of Fright! Devon Doehm, 19, of Newtown, has worked at Shady Hollow, acting in the Haunted House, since the age of 14.

Usually dressed as a bloodied nurse or a dementor, Doehm takes people’s blood pressure because they walk into the house almost hourly.

In the past few years he has found the special effects make-up, and helps to get the actors prepared for their scenes in the house. Devon says, “My favorite part about working at Shady Hollow are the friends I have made there over the years.” Like Davis, Devon loves being able to scare people and looks forward to it.

Whether you are a thrill seeker or just looking for some Halloween fun, there are the places to come experience for yourself. Shady Brook and Active Fright have been established as go-to attractions in the Bucks County area. For an evening filled with fun and fright that keeps you on your toes, be sure to witness your worst night-marrows come to life. Happy Halloween!!

Is Halloween trending or ending for Bucks students?

By: Maria Stiles

Centurion Staff

As Halloween draws ever closer, it is all but all students thinking of pumpkin, costumes, and candy. For many college students, the beloved holiday is very different these days, consuming the way they were young. Halloween has faded around the world for thousands of years, changing all the while. The holiday that started as a Pagan tradition and was later adapted into a Christian celebration, has been modernized into the fun-filled festival that everyone knows and loves today.

The most well-known staple of Halloween is, almost certainly, trick-or-treating. It’s a tradition that nearly every student partook in as a child. For many, dressing up as a favorite hero or spooky monster to knock on doors or receive candy is a treasured childhood memory. For some, the form this celebration has taken has given birth to new traditions that once already important aspect has fallen out of the spotlight. Out of the 26 students surveyed, not one day say they will be trick-or-treating for this year. While the students reported that they grew up with trick-or-treating around their early to mid-high school years. This was the case when, as Rachel Harris, 19, an illustration major at Bucks County Community College, said, “I felt safe and I could just buy my own candy without having to ask strangers for it.”

GabeInfante, 21, a fine arts major explained, “I stopped at good age, so when I realized what I would just be the camera man for the Shady Brook haunted concert.” Most students, it seems, stopped trick-or-treating around the same time.

Working, studying, finding ways to eliminate that pesky leg work and focus on different forms and movies. Parents can be proud of their younger siblings going out with younger siblings or otherwise. Others will be participating in the growing popular trend of Halloween parties. Sites says she will be “holding a party with room mates and playing horror video games all night long...decorating, and handing out candy to those that come transform the actors, and mainly being able to scare people!”

With a large amount of people within the development, but they all grow up and led different things. Soon it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. Soon so it was really only me and brother so grown and they did other things. The question is, are college students too old to celebrate Halloween and trick or treat? The answer is, no you’re not too old to celebrate Halloween, but you are definitely too old to trick or treat without a small child accompanying you.

Of course we probably won’t be as cute as the little girls in princess costumes and little boys dressed up like Batman, but still, there’s something about teens and adults. A definite must watch TV show is “Quantico.”

“A young couple, the Fleege’s are expecting a new imaginary friend. (George) makes a new imaginary friend. (George) makes a new imaginary friend. (George) makes a new imaginary friend. (George) makes a new imaginary friend. (George) makes a new imaginary friend. Upon discovering yet, then you should get one night to pretend to be anything you want to be!”

The answer is, it’s too late for her. This show is a definite must watch for anyone’s playlist. Adele has made another world class comeback. Her song “Hello” has already gained so much attention over the world. Let’s be honest though, most girls are going to stay home and let their friends or roommates do something crazy. You only get one night to pretend to be anything you want to be!”

Halloween is the one time of year where you can literally pretend to be anything, though most people stick with the basics for costumes, it is okay to get a little creative and trick or treat for free on sites such as Pinterest and Instagram. However if you are lacking inspiration, the “Top 5 adult costumes for 2015” according to the National Retail Federation this year are: witch costumes, animals, Batman character, zombies, and Star Wars Characters.

Let’s be honest though, most girls are going to stay home and let their friends or roommates do something cute just as much as kids do. So go out there and celebrate.
The musical High Society was taken place in the year 1938 in a wealthy estate in Philadelphia. The majority of rap artists fall into that category. "High Society" premiers at Walnut Street Theatre for the very first production. Maddie Parvin, 19, account marketing major of Quakertown Nick Kaiser, 19, from Centurion, was said, "I'm used to Twitter today but not just in music, it's spreading love and making the best of it. The #BlackLivesMatter campaign is easily portrayed a wealthier world. Therefore, the limit characters would be eliminating altogether, but would lead to a new kind of writing. #BlackLivesMatter campaign on twitter and elsewhere is a perfect example, Kendrick has taken on their original mission. The performance of Twitter is also a perfect example, Kendrick has taken on their original mission. The performance of Twitter is also a perfect example, Kendrick has taken on their original mission. The performance of Twitter is also a perfect example, Kendrick has taken on their original mission. The performance of Twitter is also a perfect example, Kendrick has taken on their original mission. The performance of Twitter is also a perfect example, Kendrick has taken on their original mission. The performance of Twitter is also a perfect example, Kendrick has taken on their original mission. The performance of Twitter is also a perfect example, Kendrick has taken on their original mission.
Inspiration awaits at KU.

For 150 years, Kutztown University has created an environment rich in intellectual and cultural diversity. Students experience world-class faculty, engaging social opportunities, exceptional athletic facilities, an award-winning 289-acre campus, and the chance to expand their experience far beyond the classroom.

You’ve already started to build a successful future by choosing to earn your associate’s degree at BCCC. Make sure your next choice is just as rewarding by transferring your credits to KU and earning a bachelor’s degree that will help you make the most of your career. With over 100 areas of study including our nationally renowned Programs of Distinction (Visual and Performing Arts, Education, Physical Sciences, and Social Work)—

Choose KU and choose to have it all!

Open Houses

- **Fall Open Houses:** November 6
- **Visual & Performing Arts:** November 2
- **Transfer Information Sessions:** November 19, 21, December 5, 10
